

A free-choice vitamin and mineral supplement for beef cattle on pasture to help prevent heat stress during temperatures of 70 degrees and above, or anytime cattle are grazing fescue. Includes ClariFly® to stop flies in their larval stage. *Only available in the following states: AL, AR, CO, FL, GA, IA, ID, IL, IN, KS, KY, LA, MI, MO, MN, MS, MT, NC, ND, NE, NM, OH, OK, PA, SC, SD, TN, TX, UT, VA, WI, WV and WY.

AMAFERM® ADVANTAGE

Amaferm® is a precision prebiotic designed to enhance digestibility by amplifying nutrient supply for maximum performance. It is research-proven to maintain performance during heat stress and increase forage digestion, a common issue with fescue.

KEY SELLING POINTS

- Unique blend of clove, cinnamon and chili pepper to help maintain circulation to support animal performance in both heat and fescue situations.
- ClariFly® to stop flies in their larval stage.
- Amaferm, a precision-based prebiotic that impacts intake, feed digestibility and nutrient absorption for maintaining performance during heat stress.
- Includes garlic, considered a natural insect deterrent.

FEEDING DIRECTIONS

FEEDING AND MANAGEMENT INSTRUCTIONS

When used as directed, VitaFerm® HEAT® with ClariFly® provides sufficient diflubenzuron insect growth regulator to prevent the emergence of adult House flies, Stable flies, Face flies, and Horn flies from manure of treated cattle. Existing adult flies will not be affected. Start feeding before flies appear and continue use until cold weather marks the end of the fly season. Use VitaFerm® HEAT® with ClariFly® as part of an integrated fly control program aimed at reducing fly populations. House and stable flies can breed and develop in decaying vegetable matter or spilled silage on premises in the cattle's environment. Good sanitation practices, such as cleaning up spilled feed and preventing manure build-up around barns and fences or under feed bunks, will eliminate additional breeding sites for these flies.

Feeding Directions for Pastured Beef and Dairy Cattle

Place VitaFerm® HEAT® with ClariFly® in feeders close to water sources and/or resting areas. Allow free choice to cattle. Cattle should consume an average of 0.4 ounces of VitaFerm® HEAT® with ClariFly® per 100 lbs. of animal body weight per day, which is equivalent to 4 ounces per day for a 1,000 pound animal.

1. Assure cattle are not starved for nutrients by providing them prior to feeding VitaFerm® HEAT® with ClariFly®.
2. VitaFerm® HEAT® with ClariFly® contains added copper. Do not feed to sheep or other species that have a low tolerance to supplemental copper.
3. Offer cattle 50 pounds of VitaFerm® HEAT® with ClariFly® for every 15 head of cattle.
4. Remove all other self limiting nutritional supplements.
5. Locate VitaFerm® HEAT® with ClariFly® where cattle congregate (watering, loafing, shade areas).
6. Replenish VitaFerm® HEAT® with ClariFly® on a regular basis as needed.
7. If intake of VitaFerm® HEAT® with ClariFly® is below 0.4 ounces per 100 lbs. animal body weight per day, increase the number of feeding locations and/or change location(s) to areas more frequented by cattle.
8. If intake of VitaFerm® HEAT® with ClariFly® is above 0.4 ounces per 100 lbs. animal body weight per day, reduce the number of feeding locations and/or change location(s) to areas more frequented by cattle.

BIOZYME® 6010 Stockyards Expressway, St. Joseph, MO 64504
After adult horn fly infestation is established will require
